Summary

AI Engineer with hands-on production experience designing and shipping multi-agent AI systems using **LangChain**, **LangGraph**, and **LangSmith**. Proven track record building RAG pipelines, autonomous agent workflows, and REST APIs deployed at scale with **FastAPI** and **Docker**.

Experience

Python AI Engineer at Arcitech.ai, Navi Mumbai Feb 2026 – Present

- Shipped production **multi-agent AI systems** with **LangChain**, **LangGraph**, and **LangSmith** for orchestration, monitoring, and latency optimization.
- Designed **clickable AI suggestion cards** as a first-class response pattern, improving discoverability and engagement.
- Built **LLM-ready web-scraping pipelines** replacing unreliable PDFs, a scalable foundation for RAG; audited APIs and fixed production data-quality issues.
- Drove **GPT model upgrade** via benchmark analysis; re-engineered image upscaling pipeline, fixing hallucination defects and delivering native 2K/4K output.

Python AI Intern at Arcitech.ai, Navi Mumbai Dec 2025 – Feb 2026

- Built **ADFactors**, a multi-agent PR generation system with **LangChain** and **LangGraph**; integrated compliance agents, **web search**, and PDF generation.
- Monitored agents with **LangSmith**; cut pipeline latency by replacing high-latency reasoning models with task-optimised alternatives.
- Developed **REST APIs** with **FastAPI**, **PostgreSQL**, and **pgvector**; built **RAG systems** with persistent memory for context-aware retrieval.

AI/ML Intern at Annam.ai, IIT Ropar – Center of Excellence in Digital Agriculture Aug 2025 – Oct 2025

- Applied **MLOps** with **MLflow**; deployed models via **FastAPI** and **Docker**; researched computer vision with **PyTorch** and **Transformers** for agricultural imagery; explored **LLMs** for automation.

Projects

JobApply: AI Job Search & Resume Tailoring CLI [GitHub](#)

- Worked on a multi-agent CLI that searches 5 job boards, scores fit, and tailors resumes and cover letters per role; checkpointed pipeline, dedupe ledger, pluggable LLM providers (Gemini, OpenAI, Anthropic, Ollama), and a web UI.
- **Stack:** LangGraph, FastAPI, React, SQLite, Pydantic

Research Reader: PDF Annotation & AI Paper Exploration [GitHub](#)

- Built a full-stack paper reader with PDF highlights and comments, Markdown notes with export, and AI explain, Q&A and summaries via Gemini, OpenAI, Anthropic, Groq, DeepSeek or Ollama.
- **Stack:** React, TypeScript, PDF.js, FastAPI, SQLAlchemy, JWT

Financial Fraud Detection System [GitHub](#)

- Built an ML model on 6.3M transactions (0.13% fraud rate) with domain-specific features and class-imbalance handling to improve precision and recall.
- **Stack:** Random Forest, XGBoost, SMOTE, AUC-ROC, F1

GuardNet: Violence Detection in Public Surveillance [GitHub](#) | [IEEE](#)

- Hybrid deep learning model (ConvNeXt-Tiny + LSTM + attention) for real-time CCTV violence detection; **published at IEEE**.
- **Stack:** PyTorch, ConvNeXt, LSTM, OpenCV, CUDA

Technologies

Languages: Python, JavaScript, SQL, Bash, HTML

Agentic AI & Orchestration: LangChain, LangGraph, LangSmith, Multi-Agent Systems, RAG, Semantic Search

LLMs: GPT-4, Llama-3, Claude 3, Mistral-7B | Generative AI, Prompt Engineering, Retrieval-Augmented Generation

Tools & Platforms: FastAPI, Docker, AWS, Git/GitHub, Django | **Databases:** PostgreSQL, pgvector, MySQL, FAISS

ML Frameworks: PyTorch, TensorFlow, Keras, Scikit-learn, Transformers, SpaCy, NLTK

Data & MLOps: NumPy, Pandas, MLflow, Matplotlib, Seaborn, Plotly, Tableau

Education

SIES Graduate School of Technology, B.Tech in AI & Machine Learning

2021 – 2025
